Project Abstract Submission Form

Sec No-11	Team No-13	Project Title- Vehicle Service Booking & Tracking System
------------------	-------------------	---

1. Abstract

Vehicle owners often face difficulties in booking vehicle services, tracking the progress of service work, communicating with service centers, and maintaining service records. Traditional service management methods may involve manual booking, limited visibility of job status, and difficulties in maintaining accurate service and billing information. These issues can lead to delays and inconvenience for both customers and service center staff.

The proposed **Vehicle Service Booking & Tracking System** is a web-based application designed to simplify and manage vehicle servicing activities through a centralized platform. The system will allow customers to register their vehicles, view available service options, and book service appointments. Service center staff can manage bookings, create and update job cards, allocate technicians, and track the status of service work.

The system will also maintain information about spare parts used during servicing and generate digital bills or invoices for completed services. Customers will be able to view their service status and access their previous service history. Notifications can be provided to keep customers informed about important service updates.

The proposed system aims to improve the efficiency of vehicle service operations, reduce manual work, provide better service-status visibility, and offer a convenient platform for customers and service center staff.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090129	M Shashanth	
2520090065	M Akshay	
2520080050	G Nandha kishore	

3. Frameworks / Platforms / Software Used

1. Frontend: React.js
2. Backend: Node.js
3. Backend Framework: Express.js
4. Database: MySQL
5. Payment Integration: Razorpay
6. Push Notifications: Firebase Cloud Messaging (FCM)
7. API Testing: Postman
8. Development Environment: Visual Studio Code
9. Version Control: Git / GitHub
10. Web Browser: Google Chrome
